RE: Confirmation of chemical products for Memjet inks

To Whom It May Concern:

This letter is to confirm that all the chemical substances that comprise the ink formulations provided by Memjet for use in ink cartridges for the NorthStar printer, specifically Guthega CR4 Cyan, Guthega CR4 Black, Guthega CR5 Magenta, and Guthega CR7 Yellow, have been checked against the Korea Existing Chemical Inventory. All substances are listed on the existing chemical inventory, hence these formulas do not contain any "new" chemicals. Also, it was confirmed that none of the chemical substances that comprise these four ink formulations are considered toxic chemicals, observations chemicals, or restricted/banned chemicals per the KCMA (Korean Chemical Management Association).

Best Regards,

Tom Roetker  
Vice President of Engineering  
Memjet Labels, Inc.
